**AMENDMENTS TO THE SPECIFICATION:**

Please replace the title with the following amended titled:

[[ [ ]]METHOD AND APPARATUS FOR FASTENING ADJUSTABLE OPTICAL  
LENSES[[ [ ] ]]

Please replace paragraph [0004] with the following amended paragraph:

With improvement of software and hardware, a scanner has become a requisite for many computer users. A scanner can scan word or image data of a document, a magazine, a book or a picture, and ~~forean~~ input to a computer to process. Among various scanners, the most popular one is flatbed scanner where there is a scanning chassis mounted under a transparent flatbed and capable of reciprocating to scan a document placed on the transparent flatbed. The scanning chassis can not move by itself and it must be driven by a transmission, such as a servomotor, gear wheels, a belt and so on. When a flatbed scanner is used to scan a document, the document is placed on the transparent flatbed, and then a document cover covers the document to press the document so that the document can lie evenly ~~lie~~ on the transparent flatbed. Next, the scanner can scan the document.
